

Nushagak-Mulchatna Soil Survey

The USDA Natural Resources Conservation Service (NRCS) and the Nushagak-Mulchatna Watershed Council are five years into a partnership, producing soil survey coverage for the Nushagak-Mulchatna Watershed. Field work will be concluded in 2010 and the completed soil survey available in 2011-2012.

- ☐ A soil survey produces maps and descriptions of the soil landscape – key for understanding and working effectively with hydrology, engineering, habitat, and ecology.
- ☐ Communities mapped at detailed level (1:25,000) and include: Koliganek, New Stuyahok, Ekwok, Portage Creek, Dillingham, Aleknagik, Clarks Point, and Ekuik.
- ☐ River corridors mapped at 1:63,000 and the remaining area (northern half of the watershed) at 1:500,000.
- ☐ The NM Watershed Soil Survey a big step toward full soil coverage of Alaska accounting for 8.3 million acres.

Field data collection status for the survey as of 2009
